**CAROLINA**  
**2015**

Compiled and presented as a collaborative project between the South Carolina Law Enforcement Division and the South Carolina Department of Public Safety.

## INTRODUCTION

The 2015 edition of *Crime in South Carolina* contains general information about crime trends, provides crime data at the county level for the most recent year available, and provides descriptive information about crime. The intent of this publication is to provide statistical information about crime in the state in a simple and straightforward manner so that it can better inform policymakers, criminal justice practitioners, and researchers, as well as the general public.

The information presented in the tables, graphs, and charts in this publication indicate volume, fluctuation, and distribution of crime in South Carolina on the basis of incident reports submitted to the State Law Enforcement Division (SLED) by state and local law enforcement agencies. These reports are edited and reviewed, corrected as needed, and compiled to form the basis of the information presented in this report. It is important to note that the information in this report is only as complete as the information submitted to SLED. Accordingly, unreported crimes are not included.

Additionally, edits, updates, and corrections are made over a two-year period in order to provide agencies with the maximum window of opportunity to report as fully and accurately as possible. As a result, rates and totals from a specific year can vary from previously published totals for that same year. The data used for this report were current as of December 1, 2016. Any data published here concerning figures for prior years supersede those published in previous reports. The sum of categories for some tables, charts, or graphs may not total 100% due to rounding. The percent change in the rate per 10,000 inhabitants (or juveniles) is calculated from unrounded rates that are not displayed in the tables.

We wish to express our thanks and appreciation to the sheriffs, chiefs of police, state and local law enforcement officers, as well as the administrative staff whose hard work gathering, reviewing, and submitting crime and arrest data to the South Carolina Uniform Crime Reporting Program made publication of this report possible. The report itself is the product of a collaborative relationship between the State Law Enforcement Division, Uniform Crime Reporting Program, and the South Carolina Statistical Analysis Center located within the South Carolina Department of Public Safety's Office of Highway Safety and Justice Programs.

## TRANSITION TO INCIDENT-BASED REPORTING

In 1991, South Carolina became one of the first states in the country to implement an FBI-certified incident-based reporting (IBR) system. This new system expanded on the previous Summary Reporting System (SRS) by requiring a higher degree of detail in reporting. Whereas the SRS collected only eight Part I crimes (murder, rape, robbery, aggravated assault, burglary, larceny, motor vehicle theft, and arson), the South Carolina Incident-Based Reporting System (SCIBRS) currently collects in-depth data on 56 Group A offenses.

Additionally, the older Summary system allowed only the single most serious offense in an incident to be reported; any other offenses in the incident—and the information associated with them—were not collected. The SCIBRS allows up to five separate Group A offenses to be reported in each incident, collecting information on the offense characteristics, property, victims, offenders, and arrestees associated with each offense.

While enough data was collected using the new system to allow for historical trend reporting, SCIBRS data continued to be converted back to Summary for publication in *Crime in South Carolina*. This also facilitated comparison with the Federal Bureau of Investigation's statistical crime publications—such as *Crime in the United States*—which converts all IBR data to Summary.

*Crime in South Carolina, 2015* will be the third edition to feature exclusively IBR data. Because of the significant differences between Summary data and SCIBRS data, any comparisons between the figures published here in *Crime in South Carolina, 2015* and those released in Summary publications such as *Crime in the United States* or editions of *Crime in South Carolina* prior to 2013 are strongly discouraged.

## **DEDICATION**

This report is dedicated to all law enforcement officers—and in particular—to those who died in the line of duty serving the citizens of South Carolina. Three officers died in the line of duty in 2015:

Deputy Delton C. Daniels, Marlboro County Sheriff's Office, August 1, 2015

Patrolman Gregory T. Alia, Forest Acres Police Department, September 30, 2015

Officer Stacy L. Case, Columbia Police Department, November 7, 2015

Information regarding deaths in the line of duty was furnished by the South Carolina Law Enforcement Officers Hall of Fame.

## INDEX OFFENSES

Eight Part I offenses comprise South Carolina's crime index: murder, sexual battery, robbery, aggravated assault, breaking and entering, motor vehicle theft, larceny, and arson. These are typically categorized as violent (murder, sexual battery, robbery, and aggravated assault) and property (breaking and entering, motor vehicle theft, larceny, and arson) and provide basic measures of crime. Throughout this report, crimes are usually presented either as the number of reported offenses or as the rate of offenses per 10,000 unit of population. Because it takes into account population, the crime rate usually provides the most useful basis of comparison over time or among jurisdictions or other geographical groups. The formula for calculating a crime rate is as follows:

$$\textit{Crime Rate} = \frac{\textit{Number of Crimes}}{\textit{Population}} \times 10,000.$$

State and county population estimates used to calculate crime rates were acquired from the Missouri Census Data Center (<http://mcdc.missouri.edu>).

Clearance rates provide a measure of the degree to which crimes are resolved. This was calculated using the following formula:

$$\textit{Clearance Rate} = \frac{\textit{Number of Crimes Cleared by Arrest or Exceptional Means}}{\textit{Count of Crimes Reported}}.$$

***South Carolina's sexual battery rate increased 8.9% from 2014 to 2015. Since 1991 the sexual battery rate decreased 34.9%.***

**SEXUAL BATTERY:** Sexual battery is the penetration—no matter how slight—of the vagina or anus with any body part or object, or the oral penetration by a sex organ of another person, without consent of the victim. It includes both male and female victims of rape, sodomy, and sexual assault with an object. Statutory rape and other sex offenses are not included.

***South Carolina's larceny rate decreased 4.3% from 2014 to 2015. From 1991 to 2015 the larceny rate decreased 31.3%.***

**LARCENY:** Larceny is the unlawful taking of property from the possession of another. It includes shoplifting, pocket-picking, purse snatching, thefts from motor vehicles, thefts of motor vehicle parts and accessories, and other thefts without force, violence, or fraud. It does not include embezzlement, con games, forgery, bad checks, or motor vehicle theft.

## ARRESTS

Arrest counts provide a measure of law enforcement's response to crime. Arrest rates also provide estimates of criminal offenses such as liquor law violations or driving under the influence for which there are no victims who are likely to report the behavior. Arrest practices, policies, and enforcement emphases vary from place to place and even within a community over time. The arrest practices for certain unlawful conduct such as drunkenness, disorderly conduct, vagrancy, and related violations may differ among agencies. But the practices for robbery, burglary, and other serious crime arrests are more likely to be uniform and consistent throughout all jurisdictions. Uniform Crime Reporting procedures require that an arrest be counted on each separate occasion a person is taken into custody, notified, or cited. Annual arrest figures do not measure the number of individuals arrested, since one person may be arrested several times during the year for the same or different offenses. In this report, arrests are presented either as the actual number of arrests or as arrest rates per 10,000 unit of population. Arrest rates are calculated using the following formula:

$$\textit{Arrest Rate} = \frac{\textit{Number of Arrests}}{\textit{Population}} \times 10,000.$$

State and county population estimates used to calculate arrest rates were acquired from the Missouri Census Data Center (<http://mcdc.missouri.edu>). Arrest data for 2001 are not available and are not included in any of the data tables or charts that follow.

## JUVENILE ARRESTS

In addition to being a gauge of law enforcement's response to crime, arrests provide reliable information concerning the age of apprehended offenders. Consequently, arrest rates by age provide one of the better readily available measures of juvenile delinquency. SCIBRS procedures require that an arrest be counted on each separate occasion a person is taken into custody, notified, or cited. As a result, annual arrest figures do not measure the number of individual juveniles arrested, since one juvenile might be arrested several times during a year. State law sets the age of adult responsibility in most criminal matters at seventeen years of age, so juvenile arrest rates were calculated on the basis of the juvenile (age 0 through 16) population for each year from 1991 to 2015.

$$\text{Juvenile Arrest Rate} = \frac{\text{Count of Juveniles Arrested}}{\text{Juvenile Population}} \times 10,000.$$

State and county population estimates used to calculate arrest rates were acquired from the Missouri Census Data Center (<http://mcdc.missouri.edu>). Arrest data for 2001 are not available and are not included in any of the data tables or charts that follow.

## **FAMILY AND INTIMATE VIOLENCE**

This section examines murder, aggravated assault, simple assault, and intimidation involving victims and offenders who have either a familial or romantic relationship with one another. Familial relationships are defined as including the following victim-to-offender relationships: child, stepchild, grandchild, sibling (brother or sister), stepsibling, parent, stepparent, grandparent, in-law, and other family member. Intimate relationships are defined as including the following victim-to-offender relationships: spouse, ex-spouse, boyfriend/girlfriend, and same-sex relationships. The victim-to-offender relationship might best be understood as describing who the victim of the assault was. For example, if the victim-to-offender relationship is “child,” then the victim was the child and the offender was a parent.

Victims must be reported with their relationship to each of the offenders in the incident. When an incident has multiple offenders, individual victims will be reported with multiple relationship types. Because an individual victim may be reported with multiple relationship types, any one victim could contribute to the number of victims for more than one relationship type. For example, if a victim was the child of one offender and the sibling of another, that victim will contribute both to the number of victims who were children of an offender and to the number of victims who were siblings of an offender. Because individual victims appear in multiple relationship types, the percentages in the tables will add up to more than 100% of total victims.

*There were 32 victims of murder in 2015 who had a familial relationship with an offender.*

**MURDER INVOLVING FAMILY**

<b>Victim</b>	<b>Number</b>	<b>Percent</b>

Note: SLED works closely with law enforcement agencies throughout the year to facilitate timely and accurate data submissions. Nonetheless, at times jurisdictions experience technical issues that affect the annual totals reported here. SLED continues to add to and correct data that may alter totals in future reports.
